

September 24, 2009

WASHINGTON, DC - Today, U.S. Rep. Michael Arcuri (NY-24) announced that the City of Utica will receive a \$1.2 million grant from the Federal Transit Administration (FTA) to construct a state-of-the-art multi-modal transportation center in downtown Utica.

"I am pleased that this grant award has come to the City of Utica for such a vital project to help build a great transportation facility in downtown Utica," **Arcuri said**, "This multi-modal center will provide residents of the entire Mohawk Valley with better access to downtown Utica for shopping, travel and public parking. I look forward to the development of this center and offer my continued support to this project in the future."

These funds are part of a \$5 million earmark secured for the project in 2005 through the last Surface Transportation Authorization (Highway Bill) by then-Congressman Boehlert. The City of Utica is required to submit an application and comply with FTA guidelines before funds are released. The City previously received a FTA grant for this project in the amount of \$1.15 million, bringing total federal funding awarded for this project to \$2.35 million. The funding announced today will be used for additional design work and preliminary site work in advance of construction.

Current plans for the Utica Multi-Modal Center include a Centro bus transfer station, street-level shops and a garage with approximately 270 parking spaces.
